IoTivity

Listing details

Reference Number:	RF200559

Common

Price:	$ 0.00
Country:	United States
Description:	

IoTivity

Each day more and more devices are coming online, adding to the ever-growing Internet of Things (IoT). Analysts agree the IoT will grow to many billions of devices over the next decade.

The challenge for the IoT ecosystem is to ensure these emerging IoT devices can connect securely and reliably to the Internet and to each other.

The IoTivity project was created to bring together the open source community to accelerate the development of the framework and services required to connect these billions of devices.

The IoTivity project is sponsored by the Open Connectivity Foundation (OCF), a group of industry leaders who will be developing a standard specification and certification program to address these challenges.

IoTivity will deliver an open source reference implementation of the OCF standard specifications, yet will not be limited to those requirements.

Open Source License

IoTivity code contributions are shared under the Apache 2.0 license.
