Job Description:	

Job description

Working in an agile engineering culture.

Architect, design, and implement mobile libraries, frameworks, and products.

Design features and functionality with the product owner.

Implement highly reliable and reusable code for iOS and Android devices.

Experience implementing RESTful mobile applications in highly rated Google Play or Apple App Store deployed applications.

Ten or more years of mobile IoT application design, development, and architecture experience.

Experience architecting and delivering IoT applications communicating via WAN, LAN and PAN (BLE, Matter NFC) networks with high reliability, redundancy, and caching.

Experience delivering Video (WebRTC HLS), Firebase, push notifications, dynamic linking, and analytics knowledge.

Knowledge of the Android SDK and experience of the full Android application development lifecycle.

Code multi-tasking skills for processes, tasks threads management and debugging.

Applied security privacy skills such as SSO, OAuth, IDP, and GDPR requirements.

Experience with SQLITE database design for data persistence.

BS in Computer Science.

Familiar with common design patterns MVC and MVVM.

Key Skills

Architect, WAN, Database design, Debugging, LAN, Agile, MVC, Android SDK, Analytics
