Description:

This course provides an overview and insights into data generation, analysis, and usage from IoT systems, and uses multiple case studies to explain how Analytics is used in IoT scenarios to accomplish desired outcomes.

Get a detailed understanding of the role data analytics plays in deriving business value out of Internet of Things. A key component of this course will be developing an understanding of the different kinds of IoT use cases across verticals, a brief overview of the IoT ecosystem, communication needs for IoT, the overarching architecture and an understanding of the data architecture. Alongside topics that will be illustrated include different analytics as applied to IoT, different key performance indicators (KPIs) in IoT analytics, along with a preliminary understanding of some basic algorithms for IoT analytics.
