Description:

Kinoma - Open Source IoT Development Tool

Kinoma, a Marvell Semiconductor hardware prototyping platform encompasses three different open source projects. Kinoma Create is a DIY construction kit for prototyping electronic devices. Kinoma Studio is the development environment that works with Create and the Kinoma Platform Runtime. Kinoma Connect is a free iOS and Android app that links smartphones and tablets with IoT devices.

The Kinoma line of prototyping solutions for IoT innovators is:

Open Source

The KinomaJS application framework is open source under the Apache License Version 2.0 and product case design files and PCB files are available on GitHub.

Open Sensor

Kinoma's hardware prototyping products work with off-the-shelf sensors.

Open Cloud

Script apps to work with any cloud services a project requires; KinomaJS doesn't limit apps to a private cloud or specific network protocols.
