

IEEE Global IoT SUMMIT

Listing details

Reference Number: RF387905

Common

Description:

The Organizing Committee of the International Conference on Wireless Networks and Mobile Communications (WINCOM 2017) has been working with the IEEE IoT Summit within the framework of the IEEE International IoT Summit series – on holding and organizing a IoT Summit in Rabat, Morocco ; and is today proud to announce its co-location with WINCOM 2017.

The Internet of Thing (IoT) refers to the connection of devices (other than typical fare such as computers and smartphones). The number of connected devices will reach a staggering about 50 billion in 2020. The job market for the internet of thing is following this trend and is expected to reach about 5 million in the next few years. At the same time, the incredible variety of available software and hardware currently on the market and the very fast pace of further development makes it quite challenging to search and teaching this topic.

This meeting on Internet of Things SUMMIT focuses on discovering and explaining, based on the recent research and experiments, the architectures & protocols for efficient interconnection of things, IoT infrastructure deployment, IoT applications, IoT services (real-time) and the standard development.

The international experts on IoT have been invited and attracted to share their state-of-the-art knowledge with the emerging IoT community in Morocco

Event Date: Friday, November 03th, 2017
