

M2MLabs Mainspring - Application Framework

Listing details

Reference Number: RF191516

Common

Price: \$ 0.00
Country: United States
Description:

M2MLabs Mainspring - Open Source Application Framework

M2MLabs Mainspring is an open source application framework for building machine to machine (M2M) applications such as remote monitoring, fleet management or smart grid. M2M applications can be prototyped in hours rather than weeks and finally transferred to a high performance execution environment built on top of a standard J2EE server and the highly scaleable Apache Cassandra database.

It covers common functionalities required by M2M applications:

- Flexible modeling of devices
- Device configuration
- Communication between device and application
- Validation and normalization of the data
- Long term storage of data sent by devices
- Data retrieval functions for external applications using REST Api
