

The GSMA Webinar Series 2017-2018

Listing details

Reference Number: RF133395

Common

Description:

Mobile IoT (licensed spectrum low power wide area) networks are a high-growth area of the IoT and will play an important role in connecting up billions of new devices. Over 40 successful Mobile IoT pilots have been released globally in the last year by a range of mobile operators, and now the industry is moving to commercial deployments. This webinar series, sponsored by Huawei, explores how companies can make the next big step forward, going from pilots to a successful launch to market.

You can find a complete list of the webinars below:
