Mojo v3 FPGA Development Board

Listing details

Reference Number: RF146534

Common	
Price:	\$ 74.95
Country:	United States
Description:	
Mojo v3 FPGA Development Board	

This development board is a field-programmable gate array (FPGA), meaning that you get the pleasure of configuring the digital circuits on the Mojo v3 to your own specifications. The goal of the Mojo v3 is to get you up and running with a FPGA as easily as possible.

The Mojo v3 FPGA uses the logic optimized Spartan 6 Lx9 and the high performance ATmega32U4. Needless to say this board has no shortage of processing power. The ATmega32U4 comes with a USB (DFU) bootloader which will allow you to install future upgrades to the firmware without having to buy a programmer.
