

ACROBOTIC WeMos ESP8266 D1 Mini V2 IoT Kit

Listing details

Reference Number: RF873100

Common

Price: \$ 19.99

Country: United States

Description:

Developing Internet Of Things (IoT) applications have become incredibly easy and inexpensive thanks to the availability of low-cost integrated circuits such as the ESP8266. This development board allows anyone to quickly get started building their next internet-connected project in seconds!

Just plug into a USB port, download the programming app (Arduino IDE), and you'll be ready to start writing code that runs on this revolutionary chip. Plenty of examples, guides, and projects are available for taking your first steps!
