

Verizon - IoT Security Services

Listing details

Reference Number: RF135827

Common

Price: \$ 0.00

Country: India

Description:

The Internet of Things (IoT) promises to reinvent how you do business. With more connections coming online each day, securing your devices and apps can be a bit of a challenge. Our IoT Security Credentialing service adds an extra layer of protection, over and above your existing security.

IoT Security Credentialing helps protect your business in three ways:

- **Application protection:** Get an “over-the-top” (OTT) layer of security to help secure your IoT devices and apps, regardless of provider.
- **Trusted authentication:** Give select employees and even devices access to apps or IoT devices.
- **Data privacy:** Help keep your organization’s data secure through encryption.

Verizon’s IoT Security Credentialing will provide:

- Application protection: an “over-the-top” (OTT) layer of security to help secure IoT devices and apps, regardless of provider.
- Trusted authentication: ability to give select individuals and/or devices access to apps or IoT devices.
- Data privacy: Help entities keep data secure through encryption.
