

INTERNATIONAL CONFERENCE ON MATERIALS SCIENCE AND ENGINEERING, 4 September 2019

Listing details

Reference Number: RF943391

Common

Description:

Keeping updated on the latest trends in material science across a wide range of industries can be an intimidating task. Realizing this imperative, PRISM is set to organize International Conference on Materials Science and Engineering which is going to take place during September 04-06, 2019 at Melbourne, Australia with a view to promote awareness and enhance research aiming in developing solutions for the challenges encountered.

This materials science conference will provides an international medium to share and exchange the theoretical and experimental studies and research related to the electronic, electrochemical, ionic, magnetic, optical, and biosensing properties of solid state materials in bulk, thin film and particulate forms. It focuses on synthesis, processing, characterization, structure, physical properties and computational aspects of nano-crystalline, crystalline, amorphous and glassy forms of ceramics, semiconductors, layered insertion compounds, low-dimensional compounds and systems, fast-ion conductors, polymers and dielectrics.

Materials Oceania aims to bring together leading academic scientists, industrialist, research scholars, students, delegates and exhibitors to exchange and share their experiences, research results about all aspects of Materials Science, Nanotechnology, Chemistry and Physics. This engineering conference is also providing a platform to the companies and/or institutions to present their services, products, innovations and research results.

date:4 September 2019 09:00 - 6 September 2019 14:00
