

THE PREMIER EVENT FOR SENSORS IN AUTONOMOUS VEHICLES, JUNE 25-26, 2019, SAN JOSE, CA

Listing details

Reference Number: RF243504

Common

Description:

THE RACE TO AUTONOMY

In the revolutionary age of autonomous vehicles, it is predicted that four million vehicles will achieve level 4/5 within the next 11 years. Boundaries are rapidly being broken to bring ease to society, but how far away are we from this idealistic future? Throughout this newly expanded two-day Autonomous Vehicle Sensors Conference, industry pioneers will consider: is this technology ready to usher this new age? What is yet to be discovered in sense and compute technology to make this future possible and what consequences do we need to evaluate?

With over 200 attendees in its inaugural year, and sister event to Sensors Expo & Conference, AVSC is bringing industry visionaries, rising start-ups, analysts, and the investment community to discuss the strengths and challenges in the race to autonomy. With comprehensive technical sessions and interactive panels, AVSC is providing the only opportunity for design engineers and OEMs to learn about the sensor technologies driving the automotive industry forward.

when:JUNE 25-26, 2019
