Job Description:

As a Security Engineer, you will be responsible for the development and support of Identity and Security Platform for customer-facing cloud applications. The ideal candidate will have prior experience with IAM and security-related systems and be familiar with the entire lifecycle of Identity and Access management.

Responsibilities

- Design and lead the development of Identity and Access management APIs for Cloud applications
- Develop and maintain authentication and authorization services
- Application development with Java and Node.js
- Research, design, develop, and validate security technologies
- Implement new features and enhance existing features
- You'll be responsible for building rapid prototypes and working on dynamic projects

Experience/Skills/Education Requirements

- BS in Computer Science or related field
- 5+ years of software development experience
- 3+ years of REST API development with JSON-based payloads
