

International Workshop on Resource Brokering with Blockchain, 10 Dec 2019, Sydney NSW, Australia

Listing details

Reference Number: RF613024

Common

Description:

Blockchain is a unique technology and a fundamental concept of computer science. Moreover, Blockchain has proven itself to be instrumental for many applications, ranging from financial to governmental services. In many ways, this transformed applications and development to rethinking the how information is distributed and processed over its infrastructure. While the majority of these applications are in the financial domain, key opportunities lie in connecting infrastructural services, such as Cloud, Fog and Edge computing with blockchain to create and provide new applications and services.

The aim of this workshop is to bring together researchers and practitioners working in distributed systems, cryptography, and security from both academia and industry, who are interested in the technology and theory of blockchains and their protocols.
