Job Description:
IoT Software Designer / Developer

At Molex, we're committed to improving people's lives and making the world a better place. The mission of the Industrial Automation group at Molex is to drive and support the evolving needs of our global customers and partners in the (r)evolution of technology and platforms to support Industry 4.0. Our products and platform support customers in diverse market sectors, including robotics, plant automation and process control.

This position is responsible for working with our Advanced Technology Team to prototype and then productize the complete provisioning solution for our IoT devices.

Responsibilities:

- Create proof of concept for provisioning solution
- Define requirements for implementing solution through Molex
- Transfer the knowledge gained from the PoC to a larger team to implement the end-to-end solution

- Depending on skills and abilities, there is a potential to grow and lead this team
