Job Description:

As the Software Engineer specializing in IOT, you'll...

- Work within IoT/Connectivity Domain Engineering group, performing the design, development, deployment, lifecycle, operation and continuous improvement of IoT platforms and products.
- Design and implementation of database data models and schemas.
- Translating customer needs and requirements, using technical principles into reusable API based microservices
- Set up and maintain CICD pipelines
- Develop platform specific technology functionality for business requirements that leverage opportunities from evolving and future technologies.
- Participate in world class software development!
