Job Description:

Job description

Ref ID - J42395a

3+ years of experience in a web development role
3-4+ years of full stack experience with Angular or React with Node or Python/Scala based backend
Strong software development experience in addition to detailed understanding of user interface frameworks in bootstrap and material UI, back-end software architecture interactions and node module capabilities
Previous experience working with node.js, angular X or React, Python, Docker, Kubernetes REST API creation
At least 1 project demonstrating a clear understanding of an end-to-end application design
Previous experience working with building application containers like Docker and using automated deployments like Chef, Puppet and Jenkins
There is a lot of work around either integration, component development or full stack development.
Desire FTEs with full stack/application (Non JAVA/SPRINGS/HIBERNATE)
Previous experience with No SQL database backends like MongoDB
Developing component in NodeJS/Typescript

Perfect fit if implementation is full stack (React/Angular) w/ Flask
