

Reinforcing Infrastructure: IoT as a Catalyst for Resilience in Times of Uncertainty

Listing details

Reference Number: RF672188

Common

Description:

This webinar outlines with concrete cases how executives can take proactive steps in their IoT investments to strengthen business resilience, customer relationships, technology systems and operations. We will explore how smart workplaces support business continuity; how cyber-physical systems integrate horizontal and vertical mobility concepts and how the built environment supports manufacturing in times of uncertainty.

Is a set of webinars hosted by the IOTSWC and the IIC to be held during 2020 and 2021 where IOT, AI and machine learning experts will discuss the digital transformation and the coming future after the COVID-19 pandemic. Check out our webinar programming.
