Description:

Interact with the world and rapidly prototype IoT applications using Python About This Book * Rapidly prototype even complex IoT applications with Python and put them to practical use * Enhance your IoT skills with the most up-to-date applicability in the field of wearable tech, smart environments, and home automation * Interact with hardware, sensors, and actuators and control your DIY IoT projects through Python Who This Book Is For The book is ideal for Python developers who want to explore the tools in the Python ecosystem in order to build their own IoT applications and work on IoT-related projects. It is also a very useful resource for developers with experience in other programming languages that want to easily prototype IoT applications with the Intel Galileo Gen 2 board. What You Will Learn * Prototype and develop IoT solutions from scratch with Python as the programming language * Develop IoT projects with Intel Galileo Gen 2 board along with Python * Work with the different components included in the boards using Python and the MRAA library * Interact with sensors, actuators, and shields * Work with UART and local storage
