Description:

This is the perfect kit to kickstart your child's journey in innovation with Internet of Things (IoT) which has emerged as one of the game-changing digital technologies of today and the future.

Kids as young as eight years old can start making IoT projects in a matter of minutes and develop a deep understanding of the Internet of Things (IoT) while building them.

The kit includes over 40 electronic components - sensors, connectors, a high precision servo motor and many more - that can be used to make 100+ projects from smart home automation projects to utility apps to wearable electronics.

And with the scope of making projects that can be controlled using mobile apps - the possibilities are truly endless.
