

Footbot Air Quality Monitor IOT

Listing details

Reference Number: RF343959

Common

Price: \$ 199.00

Country: United States

Description:

The Footbot Air Quality Monitor is an IoT device. It uses an LED display to visualize the quality of the air and expose pollutants in the air. It is a handheld device that provides real-time measurements of fine particles (PM2.5), total VOC, Carbon Monoxide (CO), Carbon Dioxide (CO2), temperature and humidity. It is constructed of white plastic, stands upright and a small power adapter plugs into a nearby outlet, that indicate status and air quality, blue is good, orange is bad. It's also used to configure settings and to set up the Footbot, including connecting it to your Wi-Fi network, adjusting LED intensity, setting room location, and installing firmware updates.

Footbot Air Quality Monitor Features:

- Keeps the humidity and temperature levels normal
- Develop more focus and energy by breathing fresh air
- Increase the lifespan of the users
- Very fast and simple installation process
- cleans the air pollution
